Gregory Cooke

ASTROPHYSICS · POSTDOCTORAL RESEARCHER

+447714022765 | cookehmh@gmail.com | www.gregcooke.co.uk | github.com/cookehmh | @g_j_cooke | ORCiD: Gregory Cooke

Employment

Institute of Astronomy, University of Cambridge; PI: Nikku Madhusudhan — *Cambridge, UK*

Research Associate in Exoplanetary Atmospheres — *August 2023 - present*

- My work centres on simulations of exoplanets in the sub-Neptune regime using one-dimensional (1D) and 3D photochemical models.
- I am exploring the chemical nature of habitable exoplanet atmospheres, assuming various planetary conditions.
- I am examining how biologically-produced molecules influence the spectroscopic signature of exoplanet atmospheres.
- I am a supervisor for the Stellar Structure and Evolution 3rd year undergraduate course.

Education

University of Leeds — *Leeds, UK*

PhD in Astrophysics; Thesis title: 3D simulations of oxygenated rocky planetary climates and observational predictions. Advisors: Professor Dan Marsh, Dr Catherine Walsh. — *October 2019 - July 2023*

- My thesis focused on simulating rocky worlds and understanding their climates, chemistry, and habitability. I used and modified the Community Earth System Model (CESM2), mostly the Whole Atmosphere Community Climate Model (WACCM6) configuration.
- I simulated early Earth with a younger Sun and with varied atmospheric oxygen (O_2) concentrations.
- I used the Planetary Spectrum Generator (PSG) to determine how detectable specific planetary properties (e.g. chemical species such as ozone and oxygen; temporal variability) are using the next generation of telescopes (e.g. LUVOIR).
- I performed simulations for tidally locked M dwarf exoplanets (Proxima Centauri and TRAPPIST-1 systems) and predicted observations of these exoplanets.
- I found, for the first time, that it is possible for lethal surface concentrations of O_3 to build up on the surface of habitable zone exoplanets.
- My thesis received recognition for Research Excellence from the Dean of Postgraduate Research Studies.
- I was selected competitively as a Priestley Climate Scholar.

University of Manchester — *Manchester, UK*

MPhys in Physics (First-Class Honours: 81.4%) — *October 2015 - June 2019*

- Two MPhys projects:
  1. Investigating and defining habitability metrics for all known exoplanets.
  2. Designing an optimized telescope search for habitable exoplanets using the Besançon galactic model.
- Most optional courses taken were related to astrophysics (e.g. Astrophysical plasmas, General relativity, Exoplanets).

Funding

University of Leeds — *Leeds, UK*

STFC studentship — *October 2019 - April 2023*

- A 3.5-year STFC studentship (approximately worth £75,000).
- Funding for travel and funding for the conference fee to attend the *3rd Eddy Cross Disciplinary Symposium: Sun, Earth, Planet, Space, Atmosphere and Ocean*, in Vail, Colorado, USA (total $2,800).

Jun 2021	**The Coupling, Energetics, and Dynamics of Atmospheric Regions workshop**, *Atmospheric escape on oxygenated Earth-like exoplanet atmospheres*.	*Virtual*
Jul 2020	**Exoplanets III**, *Variable detectability of biosignatures on inhabited worlds*.	*Virtual*

Software experience

- I am an advanced user of Python for atmospheric data analysis, e.g., matplotlib, pandas, numpy, and xarray.
- I have used and modified the FORTRAN codes `Atmos` and `Photochem` which model planetary atmospheres in 1D.
- I have used and developed an open-source 3D climate model model (`CESM2`-`WACCM6`). I have read Fortran-90 code to understand how certain calculations in `WACCM6` are made. I modified the Fortran-90 code to set up different planetary conditions (e.g. altered upper boundary conditions, tidally locked the model, and implemented absorption in the Schumann–Runge bands for H_2O and CO_2).
- I have developed Python code in Jupyter Notebook to analyse vast amounts of climate data that can switch between different types of plots and datasets. I developed the Stellar Wind and Irradiance Module (`SWIM`), a flexible notebook for multi-model use that downloads **Mega-MUSCLES** stellar spectra and scales the exoplanet to any exoplanet chosen by the user.
- I used and developed a pipeline to convert `WACCM6` output to interact with the Planetary Spectrum Generator (`PSG`). I used new methods (where I swapped particular atmospheric components) to analyse the results for the `WACCM6` oxygenated scenarios.
- Coding experience in C++ during my master's degree. The final project was to design a chess game using C++.

Teaching

University of Cambridge *Cambridge, UK*

Supervisor Stars and Stellar Evolution *October 2023 - present*

- Supervised the third year (part II) Stars and Stellar Evolution lecture course delivered by Max Pettini.
- Supervised student groups between the sizes of 1-3 students.

University of Leeds *Leeds, UK*

Introductory python course *September 2022*

- Introduction to Python lesson during a Community Earth System Model (CESM) tutorial.
- I demonstrated data visualisation using Xarray, Matplotlib, and Cartopy in functions combined with IPyWidgets in a Jupyter notebook.

University of Leeds *Leeds, UK*

Lab demonstrating *October 2019 - May 2022*

- I taught experiments in the Phys 10001 undergraduate laboratory to 1st year students including: the determination of Planck's constant; measurement of Earth's magnetic field, spectrometer measurement of sodium lines; the viscosity of glycerine; and electrical circuits.
- I marked lab workbooks and formal reports on several of these experiments.

University of Leeds *Leeds, UK*

Informal MPhys student supervision *October 2021 - March 2022*

- I aided B. Butcher to produce and analyse transmission spectra of Jupiter-sized exoplanets.
- I helped I. Willis analyse WACCM data and produce figures using Python.

Organisation and citizenship

University of Leeds *Leeds, UK*

Internal seminars chair *January 2020 – October 2022*

- I arranged and chaired internal seminars for the University of Leeds Astrophysics group.
- I organised and led weekly informal science sessions where members of the group get together to discuss their current work.
- I led a journal club that ran every three weeks.

University of Leeds Priestley scholars *Leeds, UK*

Priestley Climate Scholar *January 2020 – December 2021*

- I attended multiple seminars on interdisciplinary topics relating to climate change, including transport, climate finance, climate modelling, and climate justice.
- I co-organised a seminar on climate finance, as well as a monthly journal club focussed on climate science topics.

University of Manchester Men's Hockey Club *Manchester, UK*

Treasurer *May 2017 - May 2018*

- I was elected out from a club of approximately 80 members.
- I managed ∼£20,000 in financial transactions between the club, club members, the Athletic Union, and several different organisations.

Public engagement and press

- Invited talk at Bradford Astronomical Society (2024, TBC).
- Public talk on *Jill Tarter and the Search for ExtraTerrestrial Intelligence* (March 2024).
- Public talk on *A Brief History of Women in Astronomy* for International Women's Day (March 2024).
- Invited talk at Sidney Sussex Wilson-Walker Natural Sciences Society (March 2024).
- Invited talk at Harrogate Astronomical Society (February 2024).

- Public talk at the Institute of Astronomy, University of Cambridge, *Exoplanet Atmospheres* (November 2023). **YouTube**.
- Invited talk at Wakefield and District Astronomical Society (July 2023).
- Invited talk at Bradford Astronomical Society (April 2023).
- **Everything Astronomy** virtual session for Xavier Space Solutions (February 2022).
- I have written a number of astronomy news articles for the astronomy magazine **Popular Astronomy**.
- TikTok Video summarizing my research for COP 26 and how it is important for understanding our planet (2021).
- **Live YouTube talk** for the University of Leeds Be Curious festival on planet habitability (2021).
- **Priestley Scholar Twitter spotlight**. I was retweeted by the Priestley Scholar Twitter account for a whole day as I tweeted about my research and scientific interests (2021).
